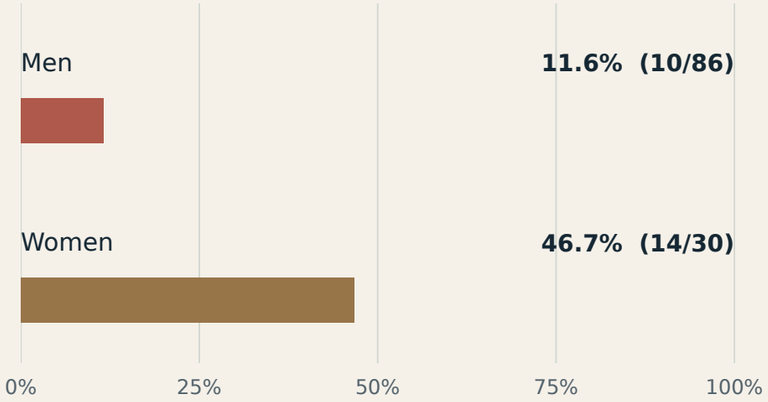
COULD JACK HAVE BEEN SAVED?

Only 10 of 86 Jack-like men survived; first-class young men fared better than third-class peers, but class was not a simple survival ladder.

01 / YOUNG WOMEN FARED BETTER

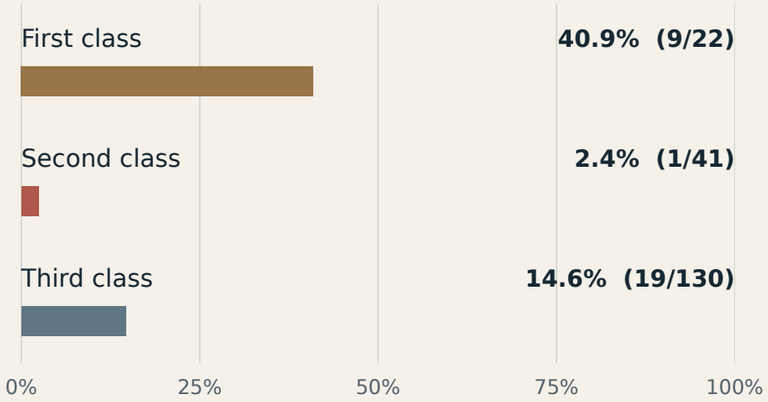
Third class, known ages 18-25



Same class and age range; women had higher survival.

02 / CLASS WAS NOT A LADDER

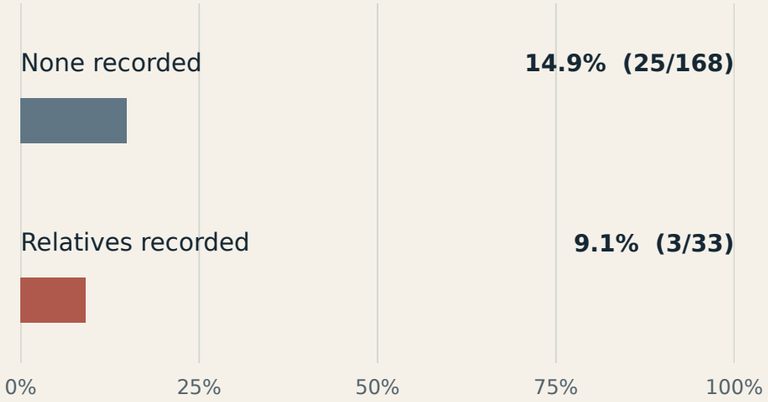
Men, known ages 18-30



Second class was lower than third in this subgroup.

03 / NO CLEAR FAMILY ADVANTAGE

Third-class men, known ages 18-50



The registered family hypothesis was not supported.

WHAT DATA CANNOT TELL US

Whether changing Jack's ticket would save him: lifeboat access and evacuation timing are unobserved.
