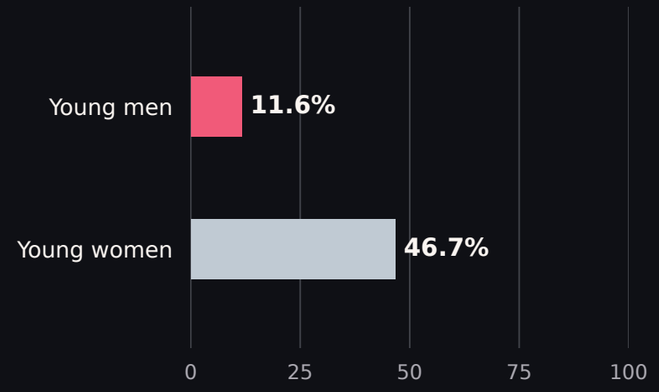
COULD JACK HAVE BEEN SAVED?

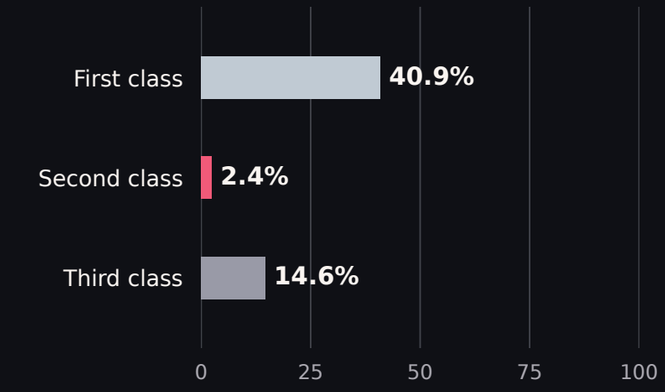
Only 10 of 86 Jack-like men survived; first class was associated with better survival for young men, but class was not a simple safety ladder.

01 / YOUNG WOMEN FARED BETTER



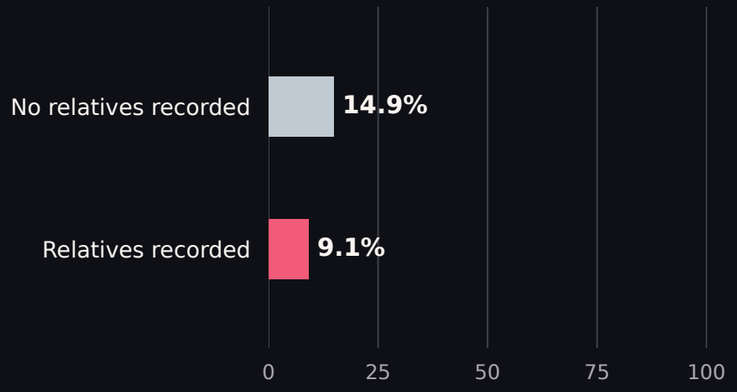
3rd class, ages 18–25: men 10/86; women 14/30.

02 / CLASS WAS NOT A LADDER



Men 18–30: 1st 9/22; 2nd 1/41; 3rd 19/130.

03 / NO CLEAR FAMILY ADVANTAGE



3rd-class men 18–50: none 25/168; yes 3/33.

WHAT DATA CANNOT TELL US Whether changing Jack's ticket would save him: lifeboat access and evacuation timing are unobserved.
